# TMS THERAPY

## Transcranial Magnetic Stimulation Therapy

Good Samaritan offers Transcranial Magnetic Stimulation (TMS) treatment. TMS is a noninvasive procedure that uses magnetic fields to stimulate nerve cells in the brain to improve symptoms of depression. TMS is typically used when other depression treatments haven't been effective.

Depression is a treatable condition, but for some people, standard treatments aren't effective. Repetitive TMS is typically used when standard treatments such as medications and talk therapy (psychotherapy) don't work.

## Location

TMS Treatment is located in the Neuromodulation Clinic on the fifth floor of Good Samaritan's Health Pavilion.

Have questions regarding this program? Please call 812.885.3292.
